(54) OIL PICKUP APPARATUS FOR HERMETIC COMPRESSOR

(57) Abstract:

PURPOSE: An oil pickup apparatus for hermetic compressor is provided to reduce wear and prevent load loss of the compressor by allowing the oil circulation to be smoothly performed through the compressor.

CONSTITUTION: A hermetic compressor comprises a rotational axis(30) rotating along with the rotation of a rotor(20); a bearing(70) arranged at the outer periphery of the rotational axis so as to support the rotational axis; and an oil pickup member(100)

mounted at the lower end of the rotational axis and which feeds oil to the interior of the bearing. The oil pickup member has an end expanded into a conical shape. Thus, the oil stored in the oil pickup member has an increased centrifugal force when the oil pickup member rotates along with the rotational axis, and at the same time the resistance caused by a flow loss during an oil pumping operation is reduced.
